

0.014" GUIDEWIRE

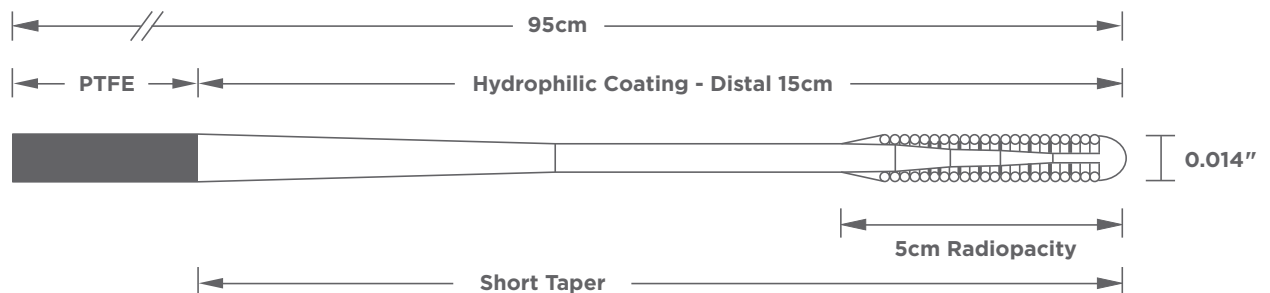

The world's first & only guidewire designed specifically for the TCAR procedure

The ENROUTE® Transcarotid 0.014" Guidewire was developed to provide precise lesion and atraumatic vessel navigation in tortuous short vessel segments while performing TCAR. Its unique, 95cm length, short taper, and shapeable tip are designed to make the TCAR procedure easier and more efficient.

95cm ergonomic control • Precise lesion navigation • Device delivery in short vessels
